Dear Reader,

Our first issue was very well received and I am pleased to present you with the second issue of IJM Today. A good mix of articles by eminent authors have been chosen for this issue.

Medical science has grown by leaps and bounds in the last century. However, the information technology front has grown several times over. With most Indian cities barely having a telephone and television network about three decades ago, today most teenagers can boast of their personal cell phones, iPods and the internet. Physicians who have been out of medical college while these technological developments were taking place are now well-established private practitioners or super-specialist consultants. Most of these senior physicians could extend their reach if they placed their own websites as Dr. Aniruddha Malpani writes in this issue. Accepting any new technology appears daunting initially. Mastering it is only a matter of investing some time and effort.

With best wishes for the season ahead!

DR. SANJAY AGRAWAL
